

# Mapping Internet Access in Multnomah County

Charles Hanks

## Introduction

Suppose my client is the Multnomah County Library (MCL). Following the approval of Measure 26-211 by voters in 2020, the county is funding renovation of 8 of the 19 libraries and creating a new flagship library at 7905 SE Holgate to serve East Portland.

As our daily lives have become increasingly digital, access to adequate information technology has become a necessity. The COVID-19 pandemic accelerated this shift, where video conferencing became the norm for so many of us to go to school, the doctor, and work.

However, not everyone has access to the internet at home in 2023. Our libraries provide access to information technology to everyone at no cost. The Multnomah County Library has asked that I provide a report addressing the following questions:

- Where in the county are there the most people without broadband internet access at home?
- Are the libraries' locations convenient for those who need access to information technology?

I used the 2021 American Community Survey to answer who how many people not have have access to the internet at home, where they live, and created visualization to present my findings to the Library Advisory Board.

## My Findings

- Over 20,000 people in Multnomah County do not have access to broadband internet at home.
- The largest concentrations of people without internet at home are in Downtown (15.6%) and Old Town Portland (17.5%), followed by the Piedmont Neighborhood (8%).
- With the Central and Holgate Libraries closed for construction through 2023, there is currently a gap in service in providing Downtown and East Portland with access to information technology.
- MCL plans to open a pop-up technology resource center at 510 SE Washington, however no opening date has been announced.

## Deliverables

- Static Map of Multnomah County
- Interactive Map of Multnomah County

## Code

Loading packages:

```
library(tidyverse)
```

```
## -- Attaching core tidyverse packages ----- tidyverse 2.0.0 --
## v dplyr      1.1.1      v readr      2.1.4
## v forcats    1.0.0      v stringr   1.5.0
## v ggplot2    3.4.1      v tibble    3.2.1
## v lubridate  1.9.2      v tidyr     1.3.0
## v purrr      1.0.1
## -- Conflicts ----- tidyverse_conflicts() --
## x dplyr::filter() masks stats::filter()
## x dplyr::lag()     masks stats::lag()
## i Use the conflicted package (<http://conflicted.r-lib.org/>) to force all conflicts to become errors
```

```
library(maps)
```

```
##
## Attaching package: 'maps'
##
## The following object is masked from 'package:purrr':
##
##     map
```

```
library(sf)
```

```
## Linking to GEOS 3.10.2, GDAL 3.4.2, PROJ 8.2.1; sf_use_s2() is TRUE
```

```
library(tigris)
```

```
## To enable caching of data, set 'options(tigris_use_cache = TRUE)'
## in your R script or .Rprofile.
```

```
library(tidycensus)
library(tmap)
library(leaflet)
library(htmltools)
library(htmlwidgets)
```

Authenticating US Census API key:

```
options(tigris_use_cache = TRUE)
#getting access to census data with my API key
census_api_key(census_key, install = TRUE, overwrite = TRUE)
```

```
## Your original .Renviron will be backed up and stored in your R HOME directory if needed.
```

```
## Your API key has been stored in your .Renviron and can be accessed by Sys.getenv("CENSUS_API_KEY").
## To use now, restart R or run 'readRenviron("~/Renviron")'
```

```
